Task 2

42nd International Mathematical Olympiad

Washington, D.C., United States of America

July 8–9, 2001

Each problem is worth seven points.

1. Let ABC be an acute-angled triangle with circumcentre O . Let P on BC be the foot of the altitude from A .

Suppose that $\angle BCA \geq \angle ABC + 30^\circ$.

Prove that $\angle CBA + \angle COP < 90^\circ$.

2. Prove that $\frac{a}{\sqrt{a^2+8bc}} + \frac{b}{\sqrt{b^2+8ca}} + \frac{c}{\sqrt{c^2+8ab}} \geq 1$ for all positive real numbers a , b , and c .
3. Twenty-one girls and twenty-one boys took part in a mathematical contest.
 - Each contestant solved at most six problems.
 - For each girl and each boy, at least one problem was solved by both of them.

Prove that there was a problem that was solved by at least three girls and at least three boys.

4. Let n be an odd integer greater than 1, and let k_1, k_2, \dots, k_n be given integers. For each of the $n!$ permutations $a = (a_1, a_2, \dots, a_n)$ of $1, 2, \dots, n$, let $S(a) = \sum_{i=1}^n k_i a_i$.
Prove that there are two permutations b and c , $b \neq c$, such that $n!$ divides $S(b) - S(c)$.

5. In a triangle ABC , let AP bisect $\angle BAC$, with P on BC , and let BQ bisect $\angle ABC$, with Q on CA .

It is known that $\angle BAC = 60^\circ$ and that $AB + BP = AQ + QB$.

What are the possible angles of triangle ABC ?

6. Let a, b, c, d be integers with $a > b > c > d > 0$. Suppose that $ac + bd = (b + d + a - c)(b + d - a + c)$.

Prove that $a + b + c + d$ is not prime.
