Task 3

EXERCISE 4.6

Examine the consistency of the system of equations in Exercises 1 to 6.

1. $x + 2y = 2$
   $2x + 3y = 3$

2. $2x - y = 5$
   $x + y = 4$

3. $x + 3y = 5$
   $2x + 6y = 8$

4. $x + y + z = 1$
   $2x + 3y + 2z = 2$
   $ax + ay + 2az = 4$

5. $3x - y - 2z = 2$
   $2y - z = -1$
   $3x - 5y = 3$

6. $5x - y + 4z = 5$
   $2x + 3y + 5z = 2$
   $5x - 2y + 6z = -1$

Solve system of linear equations using matrix method in Exercises 7 to 14.

7. $5x + 2y = 4$
   $7x + 3y = 5$

8. $2x - y = -2$
   $3x + 4y = 3$

9. $4x - 3y = 3$
   $3x - 5y = 7$

10. $5x + 2y = 3$
    $3x + 2y = 5$

11. $2x + y + z = 1$
    $x - 2y - z = \frac{3}{2}$
    $3y - 5z = 9$

12. $x - y + z = 4$
    $2x + y - 3z = 0$
    $x + y + z = 2$

13. $2x + 3y + 3z = 5$
    $x - 2y + z = -4$
    $3x - y - 2z = 3$

14. $x - y + 2z = 7$
    $3x + 4y - 5z = -5$
    $2x - y + 3z = 12$

15. If $A = \begin{pmatrix} 2 & -3 & 5 \\ 3 & 2 & -4 \\ 1 & 1 & -2 \end{pmatrix}$, find A^{-1}. Using A^{-1} solve $2x - 3y + 5z = 11$
$3x + 2y - 4z = -5$
$x + y - 2z = -3$

16. The cost of 4 kg onion, 3 kg wheat and 2 kg rice is Rs. 60. The cost of 2 kg onion, 4 kg wheat and 6 kg rice is Rs. 90. The cost of 6 kg onion, 2 kg wheat and 3 kg rice is Rs. 70. Find the cost of each item per kg by matrix method.

Summary

- Determinant of a matrix $A = [a_{11}]_{1\times 1}$ is given by $|a_{11}| = a_{11}$.
- Determinant of a matrix $A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix}$ is given by $|A| = a_{11}a_{22} - a_{12}a_{21}$.
- Determinant of a matrix $A = \begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{pmatrix}$ (expanding along R_1) is $|A| = a_1 \begin{vmatrix} b_2 & c_2 \\ b_3 & c_3 \end{vmatrix} - b_1 \begin{vmatrix} a_2 & c_2 \\ a_3 & c_3 \end{vmatrix} + c_1 \begin{vmatrix} a_2 & b_2 \\ a_3 & b_3 \end{vmatrix}$.
- For any square matrix A, the determinant $|A|$ satisfies the following properties.
- $|A'| = |A|$, where A' is the transpose of A.
- Interchanging any two rows (or columns) changes the sign of determinant.
- If any two rows or columns are identical or proportional, then the determinant is zero.
- If each element of a row or column is multiplied by k, then the determinant is multiplied by k.
- Multiplying a determinant by k means multiplying elements of only one row (or one column) by k.
- If $A = [a_{ij}]_{3\times 3}$, then $|kA| = k^3|A|$.
- If elements of a row or column are sums, the determinant is the sum of determinants.
- Adding equimultiples of other rows/columns to a row/column does not change the determinant.

- Area of a triangle with vertices (x_1, y_1), (x_2, y_2) and (x_3, y_3) is $\Delta = \frac{1}{2}\begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix}$.
- Minor of a_{ij} is obtained by deleting the i^{th} row and j^{th} column and is denoted by M_{ij}.
- Cofactor of a_{ij} is $A_{ij} = (-1)^{i+j} M_{ij}$.
- Determinant value equals the sum of products of elements of a row/column with corresponding cofactors, e.g. $|A| = a_{11}A_{11} + a_{12}A_{12} + a_{13}A_{13}$.
- Sum of products of elements of one row with cofactors of another row is zero.
- For $A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}$, the adjoint is $adj\, A = \begin{pmatrix} A_{11} & A_{21} & A_{31} \\ A_{12} & A_{22} & A_{32} \\ A_{13} & A_{23} & A_{33} \end{pmatrix}$.
- $A(adj\ A) = (adj\ A)A = |A|I$.
- A is singular if $|A| = 0$ and non-singular if $|A| \neq 0$.
- If $AB = BA = I$, then B is the inverse of A and $A^{-1} = B$.
- A has an inverse iff it is non-singular.
- $A^{-1} = \frac{1}{|A|}(adj\ A)$.
- If $a_1x + b_1y + c_1z = d_1$, $a_2x + b_2y + c_2z = d_2$, $a_3x + b_3y + c_3z = d_3$, then the equations can be written as $AX = B$.

- Unique solution of $AX = B$ is $X = A^{-1}B$, where $|A| \neq 0$.
- A system is consistent or inconsistent according as its solution exists or not.
- For a square matrix A in $AX = B$:

  [label=–]

  – If $|A| \neq 0$, a unique solution exists.

  – If $|A| = 0$ and $(adj\ A)B \neq 0$, no solution exists.

  – If $|A| = 0$ and $(adj\ A)B = 0$, the system may or may not be consistent.
